Jerry,

Thanks for responding. Our management is also behind my requesting, so please pass this on to yours and let me know if we need to elevate the participation and include them all in a formal exchange or simply that a smaller group go over with me to discuss what information exists regarding the oilfield and the related graben and what is the current state of the approach that the Ca DOGGR is taking.

Further, I am currently not seeking a report, but a discussion. We are well aware that this latest complaint is part of a larger, ongoing situation that has been developing for several years. Therefore, my intention is that we simply hold an "interim" discussion sufficient to address any questions that I know will (or should) come up.

Please let me know what timeframe we are looking at so I can arrange our schedules.

George

George,

Our department management would like to review this first. We'll get back to you after I get some guidance. Thanks.

Jerry

John and Jerry,

I am sending this email for us to determine a time when we can discuss and please share with me any more pertinent details that you know about this case. Daniel Dudak is on the Cc-List because of the historical email Mr. Ferrazzi shared and because of his strongly worded complaint to Kate Rao, who is in my section.

I am doing this preliminary review in order to supply that information to inquiries expected from within my agency. If you have any information that is readily accessible to send via email (or regular mail), please forward that to me.

My calendar shows open for (Mon & Tue) Dec. 23 & 24 and (Mon & Tue) Dec. 30 & 31. Please let me know your availability.

Importance: High

Kate,

Please investigate the current situation in Los Angeles County at the Windsor Hills Magnet Elementary School immediately.

This is not being handle correctly by DOGGR and their abrogation of their responsibility as a regulatory agency runs along the edge of criminality if not over it. We are being told by County representatives that they are being told by DOGGR that continued study needs to be done.

I can send you a link to InSAR imaging of the oil field area that indicates otherwise.

Subject: Overhill Graben-Los Angeles County-Ground Movement

Dear Daniel,

Let this serve as my formal complaint against the current lack of oversight and accountability on the part of the DOGGR Cypress office's responsibility to monitoring the UNDERGROUND INJECTION CONTROL PROGRAM of the Inglewood Oil Field now operated by Freeport-McMoRan Oil & Gas.

The Psomas, Fugro and Geoscience Analytical report are lacking and the Los Angeles County geologist by his own admission is unqualified to make a judgement.

What was the final DOGGR opinion of the required fault block analysis?

The secondary fault identified as the Overhill Graben has seen unprecedented movement with the expansion of operations by the operator since 2008.

This fault has been identified in numerous historical technical papers as being influenced by the enhanced recovery used by the operator.

It is now seeing acute surface expression and appears to be in an extremely stressed state.

The real issue here is the safety and well being of the elementary school children attending the Windsor Hills Elementary School of which the full length of the playground area is being bisected by the fissure.

I fear a catastrophic ground failure event is imminent.
